

## Rover Service News Letter No. 96

October, 1958

### TO ALL DISTRIBUTORS AND DEALERS

Dear Sirs,

The changes and developments set out below have taken place during the past month.

#### SECTION I

#### POLICY

Item 441 SUBJECT:

**ROVER CARS, 1959 SEASON**

MODELS:

1959 '60', '75', '90' and '105'

REMARKS:

By now Distributors and Dealers will have been advised of the 1959 range of the present series of Rover Cars. These new models can be identified as follows:

Externally, at the front by the wider bumper overriders, and inset radiator grille ribs; at the rear by wider bumper overriders and shroud over the number plate and reversing lamp.

Internally, by the crash rail over the top of the facia, clock with frontal adjustment and chromium plated glove box handles.

The existing Car Parts Catalogue and Workshop Manual have been revised and brought up to date to cover the 1959 models. Your normal free of charge allocation of these publications was circulated last week. These new editions of the Parts Catalogue and Workshop Manual completely supersede the earlier editions, which should be destroyed.

At the end of this News Letter will be found a certain number of accident-prone items which are suggested as Recommended Stocking parts for the 1959 Rover '60', '75', '90' and '105' models.

Item 442 SUBJECT:

**PLASTIC COVER FOR NEWS LETTERS**

REMARKS:

It will be noted that the studs in the News Letter plastic folder are the opposite way round to those on the previous cardboard folder. This has been done to enable News Letters to be filed with the latest information always at the top.

#### SECTION II

#### WORKSHOP AND PARTS INFORMATION

Item 443 SUBJECT:

**SETTING OF STEERING LOCK STOP**

MODELS:

Land-Rover models fitted with recirculating ball type steering.

REMARKS:

Distributors and Dealers and all others concerned with maintenance of these vehicles should check, when other service work is being carried out, that the steering lock stops are correctly set.

The following procedure should be carried out:—

- (a) The vehicle must be jacked up under the front axle until the road wheels are clear of the ground.
- (b) The steering lock stops on the swivel pin housing must be so adjusted that they come into effect a third of a turn on the steering wheel before the stops incorporated in the steering box itself come into effect.

This measurement can be checked quite simply by turning the steering wheel until the steering lock stops are felt and then "springing" the wheel up to the steering box stops. The amount of movement obtained on the steering wheel in this way must not be less than one-third of a turn.

**Item 444 SUBJECT: EXTRA EQUIPMENT**  
**MODELS: Land-Rover Series II.**  
**REMARKS: We have received many requests for Service equivalent part numbers for the various extras which are applicable to the Land-Rover Series II models. These Service part numbers, are, of course, in the Land-Rover Series II Parts Catalogue and Amendment No. 1, however, for your convenience we give below an up-to-date list of 'E' numbers and Service equivalents.**

E Number	Description	Models	Service Part Number	Service Discount
E3	Pulley for power take off	All	230177	Extra
